FORM APPROVED  
OMB NO. 0579-0036

ANNUAL REPORT OF RESEARCH FACILITY  
( TYPE OR PRINT )

New York Blood Center Inc  
310 East 67th Street  
New York New York, NY 10021

Telephone: (212) -570-3010

3. REPORTING FACILITY ( List all locations where animals were housed or used in actual research, testing, or experimentation, or held for these purposes. Attach additional sheets if necessary )

FACILITY LOCATION ( Sites ) - See Attached Listing

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY ( Attach additional sheets if necessary or use APHIS Form 7023A )

A.  Animals Covered By The Animal Welfare Regulations	B. Number of animal being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results or interpretation of the teaching, research, experiments, surgery, or tests. ( An explanation of the procedures producing pain or distress in these animals and the reason such drugs were not used must be attached to this report )	F.  TOTAL NUMBER OF ANIMALS  ( COLUMNS C + D + E )
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals	0	0	0	0	0
13. Other Animals	0	0	0	0	0

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

## **EXEMPTIONS TO QUESTION 3**

### **AMENDMENT TO PROTOCOL 06-063-03**

**Our IACUC approved a USDA space exemption for 12 sows and 84 piglets/year in order to carry out the approved protocol. Since the piglets undergo 24 hour monitoring of behavior and cardiorespiratory functions the use of a farm farrowing crate is used to keep piglets within the range of receivers and cameras. The farrowing crate is the only mechanism by which state-of-the-art monitoring is carried out with minimum loss of piglets. The sows were housed in farrowing crates for a maximum of four weeks and the piglets were housed this way for a maximum of six weeks. A 30 minute period out of the farrowing crate was provided for both the sow and piglets to exercise daily.**

## **LEVEL E**

**A number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizer drugs would have adversely affected the procedures, results or interpretation of the teaching explanation of the procedures producing pain or distress in these animals the reasons such drugs were not used must be attached to this report:**

**PROTOCOL #'S      03-178-03/04-178-03/09-204-03  
07-200-04/07-201-04**

**The aim of these studies is to utilize a rabbit model to test a new drug for its ability to prevent the arthritic deterioration typically seen with cruciate ligament injuries, and to reverse symptoms of the disease once they have appeared. The use of appropriate analgesics to relieve pain would adversely affect the results of this study. This model was approved by the IACUC on March 3, 2003, April 7, 2003, September 16, 2003, and July 12, 2004.**

## **Exception To The Animal Welfare Act**

### **Non-human Primate Cage Cleaning**

The combination of the size and weight of the monkey cage units in the primate rooms, and the difficulty in maneuvering the racks into the retrofitted rack washers create a potential safety hazard for employees. Removing these racks from the room with minimal door clearances, into the narrow corridor space, and up the incline to the rack washers is extremely difficult, even though the unused caging from these racks has been removed when possible to reduce the rolling weight. Due to these difficulties, primate caging is washed at one month instead of two week intervals. The cage bottoms and pans are washed twice daily.

The policy currently applies to all nonhuman primates within the facilities. (Currently 13 macaques.)

Elizabeth Goldentyer, D.V.M.  
United States Department of Agriculture  
Regulatory Enforcement and Animal Care  
Eastern Regional Office  
920 Main Campus Drive  
Suite 200, Unit 3040  
Raleigh, NC 27606

Dear Dr. Goldentyer,

Attached is our annual report to the United States Department of Agriculture.

The IACUC approved, with scientific justification, one exception to the standards of the Animal Welfare Act. The specific standard was 9 CFR Ch. 1, Part 3, Subpart B, Sect. 3.26 (c); the IACUC approved having hamsters in a 24 hour/day dark period and allow bedding changes once every 2-3 weeks for singly housed animals in order not to disrupt ongoing research involving circadian rhythms. This exception affected 320 hamsters (constant dark) and 50 hamsters (bedding change) in the past fiscal year.

If you have any questions or require additional information please contact me.

Sincerely,

### Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: NO COLUMN E ANIMALS
2. Number \_\_\_\_\_ of animals used in this study.
3. Species (common name) \_\_\_\_\_ of animals used in the study.
4. Explain the procedure producing pain and/or distress.
5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)
6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):  
  
Agency \_\_\_\_\_ CFR \_\_\_\_\_

### Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0040

2. Number 75 of animals used in this study.

3. Species (common name) Guinea pig of animals used in the study.

4. Explain the procedure producing pain and/or distress.

**Model of respiratory distress. Animals sensitized and then exposed to antigen. Acute respiratory distress ensues within 1-3 minutes. Some animals fully recover, however the model requires observation for a period of 5-10 minutes. Those animals that survive experience unresolved respiratory distress for a short duration of time.**

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

**The period of respiratory distress of such short duration as to make treatment unfeasible. As stated animals that recover do so fully. Those animals that do not recover within 3 minutes die acutely.**

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

**None.**

OSWEGO, NY 13126

### REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain- relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report)	F. TOTAL NO. OF ANIMALS  (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-Human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Gerbils	249	50			50

### ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all the exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

**UNIVERSITY AT ALBANY**  
**STATE UNIVERSITY OF NEW YORK**

Department of Psychology

Social Science 220  
Albany, NY 12222

**TO:**  
**FROM:**  
**DATE:** November 23, 2004  
**SUBJECT:** Annual USDA Report of Research Facility

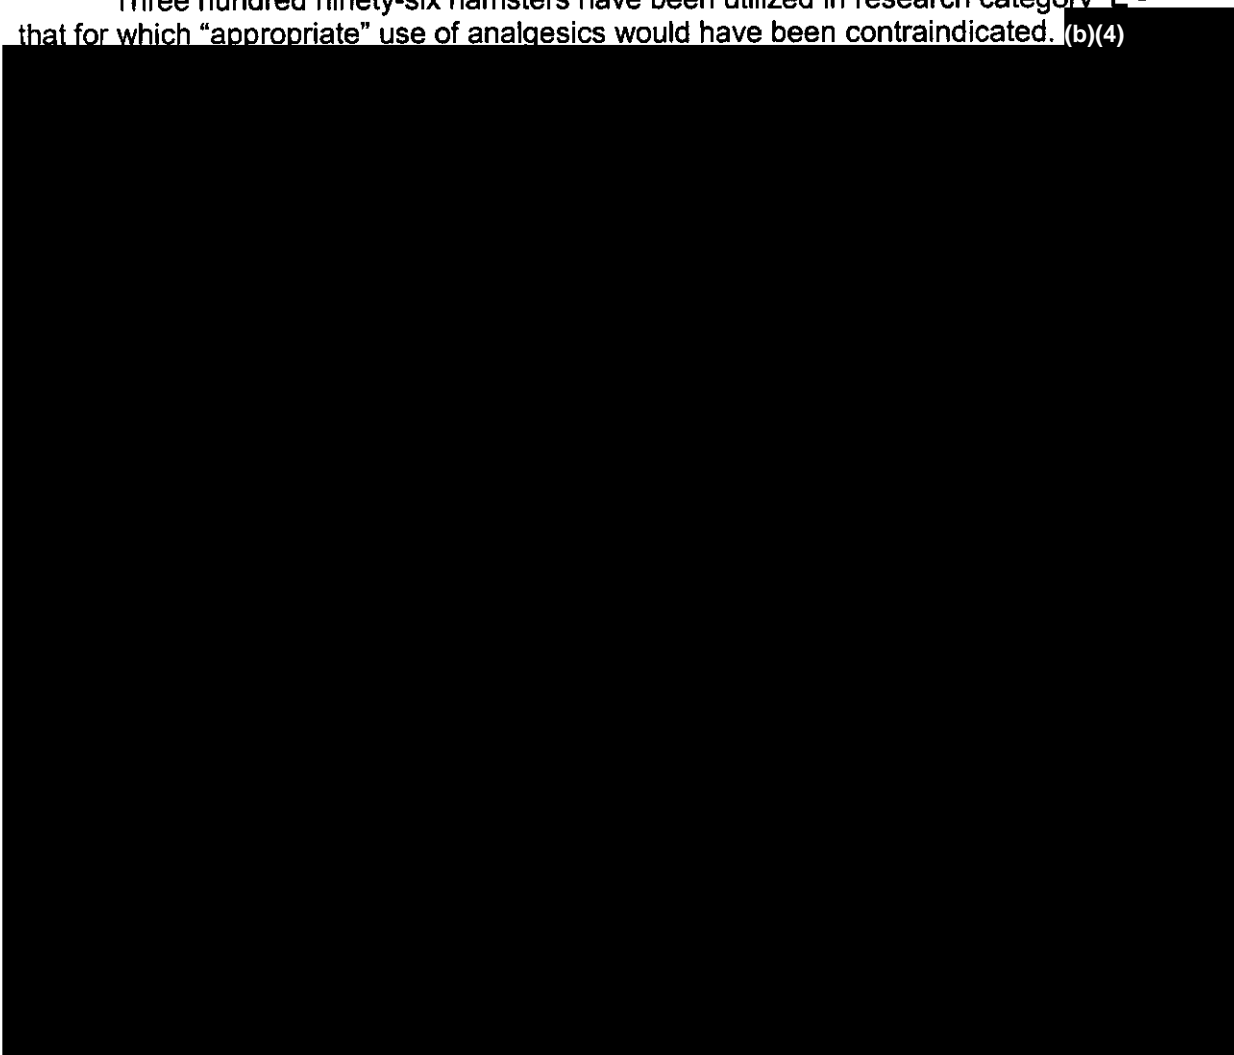

Eight hundred sixty-four hamsters are classified by Category A as animals covered by the Animal Welfare Act.

Four hundred seventeen hamsters are classified by Category B as animals that were bred, conditioned, but not used.

Forty-nine hamsters are classified by Category C. These animals did not experience pain, distress, or administration of anesthetic, analgesic, or tranquilizers.

No hamsters are classified by Category D.

Three hundred ninety-six hamsters have been utilized in research category E - that for which "appropriate" use of analgesics would have been contraindicated. (b)(4)

(Replaces VS FORM 18-23 (Oct 88), which is obsolete)

PART 1 - HEADQUARTERS

*192*

## APHIS Form 7023 Column E Explanation

This form is intended as an aid to completing the APHIS Form 7023 Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

---

1. Registration Number: 21-R-0076

2/3. Species (common name) & Number of animals used in this study:

Rabbits (352)

4. Explain the procedure producing pain and/or distress.

The anterior cruciate ligament (ACL) located in the knee is transected (that is cut). This destabilizes the knee and permits arthritis to develop. Development of an arthritic model is critical to the conduct of this research.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Pain and/or distress are limited to the period after surgery. A normal unadulterated rabbit model for arthritis is needed to successfully conduct this research. Use of analgesics, antibiotics, corticosteroids etc., introduce variables which may negate the development of an arthritis model and invalidate the experimental results. It should be noted that pain medication is given for 72 hours after surgery and the rabbits are evaluated for signs of pain and/or distress prior to stopping the medication.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency: not applicable.

CFR:

### APHIS Form 7023 Column E Explanation

This form is intended as an aid to completing the APHIS Form 7023 Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

---

1. Registration Number: 21-R-0076

2/3. Species (common name) & Number of animals used in this study:

Dogs (6)

4. Explain the procedure producing pain and/or distress.

The surgery performed produces a partial cardiomyectomy thereby reducing the size of the stomach. This results in the development of gastroesophageal reflux (GER). It is the GER that may result in the subject experiencing some distress such as stomach upset and upper airway swelling. Actual observation has shown no adverse effects in the subject population to date in those subjects that developed GER.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

The essence of the study is to monitor the onset of the GER through pH measurement, observe any effects in the upper airway, and measure airway resistance. Treating for GER would neutralize the effects of GER and it's relationship to the upper airway. Measurements would not yield valid data to either prove or disprove the hypothesis.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency: Not applicable.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Lehman College  
"Reportable IACUC-Approved Exceptions"

One protocol requires food restrictions in non-human primates as a motivator for behavioral training. Weights are checked daily and rations are adjusted so animals retain their age-appropriate body weights.

One protocol requires the housing of a male prairie vole in a small wire cage (approx. 7 sq. in.) for 24 hours. The wire cage is placed inside the home cage of a female to allow new mating pairs to become accustomed to each other and prevent the animals from fighting during the initial phase. The male is provided food and a water source ad libitum.

## **Guidelines for Reporting Animals in Column B**

**Animals reported in Column B should be those animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.**

**All animals contained on the facility's inventory on September 30 of the reporting year that were not used in a research project that year should be reported in Column B as being held for research purposes. Animals that were held but died during the year without being used for research purposes should also be reported in this column. Other animals held during the reporting year but not present at the facility on September 30 should not be reported in this column. They should be reported by the facility which possesses them on September 30.**

**Facilities with breeding colonies should report their breeding animals and any offspring which are not being used for research purposes in Column B. This number should include those animals intended for sale but not used in a research project. Animals present at the facility which were used for research in previous years but were not used in the current year (e.g., retired animals) would also be reported in Column B.**

**Animals actually used for research purposes during the reporting year must be reported in Column C, D, or E, as appropriate, whether or not they are only being held on September 30 or are no longer at the facility on that date.**

**Registration #21-R-0080**

**Hamsters used by [REDACTED] for Scrapie Research (Category E)**

[REDACTED] used 1,879 hamsters in experiments on scrapie research. The nature of these experiments included pathogenesis studies, genetic analyses, bioassays and production of high titer material for biochemical analyses. In some of these studies, particularly the bioassays and production of high titer material, animals stay until clinical disease is established with certainty. The human counterparts of scrapie include Creutzfeldt-Jakob disease and Gerstmann-Straussler syndrome. These diseases are characterized by dementia and ataxia. There is no indication that pain or stress is associated with the clinical symptoms.

We require animals for scrapie work because there is no other way to bioassay for scrapie infectivity and because the yields from tissue culture systems are too low to provide sufficient material for biochemical or molecular biological studies. Furthermore, except for a few studies on neurotransmitters, tissue culture systems cannot be used for pathogenesis or genetic studies or for the production of large quantities of infectious agent. For this reason we require the use of laboratory animals.

The incubation period in scrapie and associated diseases is long, with most of the period asymptomatic. In our studies we assess the health status of animals on a weekly basis from approximately 60% through the incubation period to the conclusion of the experiment. In bioassays, most genetic studies and production of high titer material we must be certain that animals are positive for disease. We establish positivity by observing two consecutive positive scores for hamsters. Animals are euthanized within a few days of the final positive score. This ensures that the only demonstrable clinical changes are ataxia, inactivity, and in some cases, somnolence.

It is not clear whether affected hamsters feel pain or distress. If these do occur, any attempts to alleviate pain or distress would interfere with our capacity to determine if the animals are positive for disease.

## **SUMMARY OF EXCEPTIONS**

**October 1, 2003 to September 31, 2004**

1. In a single protocol, 16 rhesus monkeys are chaired for more than 12 hours, but less than 24 hours. This is an exception to the standard set by the Animal Welfare Act which states that nonhuman primates must be given 1 hour of continuous unrestrained activity if more than 12 hours of restraint are required. The macaques used in the protocol are chaired-restrained approximately three to ten times per year. All animals are conditioned to this restraint to minimize distress associated with chairing. The IACUC approved this restraint based upon the scientific requirements for continuous data collection. The exemption was discontinued upon renewal of the protocol.
2. In a single protocol, 10 baboons had multiple survival surgeries performed in a study of perinatal physiology and developmental pharmacology in the pregnant baboon. The IACUC approved the multiple surgery protocol and its exemption was granted by USDA.

**ASSURANCE STATEMENTS**

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

## SUMMARY OF IACUC APPROVED EXCEPTIONS TO THE REGULATIONS OR STANDARDS

The University's Institutional Animal Care and Use Committee has approved an animal protocol in which animals are housed in total darkness. Housing animals in total darkness is a deviation from the lighting standards of the Animal Welfare Act and our "Requirements for Animal Use Protocols" in our Columbia University Morningside Campus/Barnard College Vertebrate Animal Protocol Summary Form Use of Live Animals for Research or Training Application. The protocol was approved for the use of up to 140 hamsters per year.

RE: IACUC Approved Exceptions

The Dowling College IACUC has approved the following exception for the diurnal lighting schedule of hamsters used by [REDACTED] in his experimental protocol:

That hamsters used in experimental studies of circadian activity rhythms be kept under conditions of constant darkness for periods up to 1 month. This is necessary to examine endogenous rhythms that are not entrained by the environmental lighting cycle. In order to assess the effects of drugs on endogenous circadian phase, the hamsters must be allowed to free-run under constant lighting conditions, in this case, constant darkness.

## PART 1 - HEADQUARTERS

**APPROVED EXEMPTIONS**  
**USDA Annual Report 2003-2004**

- 1 Protocol (89-31-04) (Dr. \_\_\_\_\_) allow woodchuck litter to stay with mother for 6 weeks until weaning, may appear overcrowded but should be less stressful for pups (Approved 9/16/04-3/16/05) **EXEMPTION FORM\***
- 2 Protocol 89-31-04 (Dr. \_\_\_\_\_) exemption to regular sanitation of nest boxes to decrease disturbance to pregnant and nursing woodchucks (Approved 9/16/04-3/16/05) **EXEMPTION FORM\***
- 3 Protocol 93-120-03 (Dr. \_\_\_\_\_) – allows for housing hamsters for 1-3 weeks in plexiglass enclosures which will be cleaned at the end of the experimental period. (Approved 6/16/03-5/16/06) **IN PROTOCOL \***
- 4 Protocol 89-68-02 (Dr. \_\_\_\_\_) Allow for three survival surgeries and one terminal surgery. The surgeries will be at least one year apart. Following the initial surgery, a CRAR veterinarian will examine the dog prior to survival surgeries. The affected animals are rare and to use less dogs the multiple survival surgeries are being requested. Survival surgery improves the outcome and efficiency of embryo recovery. In rare cases, artificial insemination will be done surgically and will count as one of the survival surgeries. (Exemption approved 9/16/04-3/16/05) **EXEMPTION FORM\***
- 5 Protocol 86-216-04 (Dr. \_\_\_\_\_) – Stalls in the lower barn that are less than 144 sq. ft. are only used to house ponies and donkeys overnight. These animals are turned out daily for several hours, weather permitting. Stalls in the mare barn that are less than 144 sq. ft. (2 stalls, each 120 sq.ft) are used primarily as “hospital stalls” for sick or injured horses for short periods of time. (Approved 9/16/04-3/16/05) **EXEMPTION FORM**
- 6 Protocol 00-86-03 (Dr. \_\_\_\_\_) – 45 cats per year – Cats will be kept overnight in the CPC in CRAR approved cat cages with food, water and litter boxes provided and will be returned to the SPCA when the lab sessions are completed, typically at the end of the second day. The cats would be housed in this area for a maximum of 30 hours. (Approved 3/18/04-9/18/04) **EXEMPTION FORM**

## **Column E Explanation, Wildlife Rabies Vaccination Projects**

**1. Registration Number:** 21-R-0124

**2. Number of animals listed in column E in this study:** 3

**3. Species (common name) of animals listed in column E in this study:**

Raccoon

**4. Procedure producing pain and/or distress:**

The three raccoons listed above were each found dead in a live-trap cage. The live-trap cages contain bait to selectively attract raccoons, the target species of this study. The traps were set before dusk in recharge basin areas in Nassau County known to be frequented by raccoons. Unexpected heavy rainfall that night produced localized flooding in the areas where some traps had been set. Three cages were found submerged six feet below the water's surface and the raccoons inside were dead, apparently due to accidental drowning.

**5. Scientific justification:**

The Zoonoses Program's Wildlife Rabies Vaccination Projects include the continuing Eastern Adirondack Oral Rabies Vaccination (ORV) Project and the Long Island Point-Source Rabies Outbreak Control Project. These are collaborative efforts between NYSDOH, the Departments of Environmental Conservation (DEC), Agriculture and Markets (Ag&Mkts), the State Police, and the United States Department of Agriculture Animal and Plant Health Inspection Service-Wildlife Services (USDA APHIS-WS), with the local county health departments in the affected areas. USDA is playing a key role in developing plans for a potential regional, multi-state effort to control raccoon rabies, and is able to provide wildlife biologists and technicians trained to help properly capture and handle a variety of wildlife species.

The project in the Eastern Adirondacks is both an ongoing evaluation of oral vaccination in wildlife, and a practical application of this technique of rabies control. Continued evaluation (i.e., trapping and sampling of raccoons) is necessary because oral vaccination is evolving as newer types of vaccine bait are developed and approved for field use. Surveillance for animal rabies cases in and around the vaccinated area is used to help monitor success of oral vaccination. However, systematic blood sampling to determine the proportion of the treated raccoon population that successfully finds and responds to the vaccine baits is needed to most accurately verify efficacy, particularly of newer methods of delivering the vaccine.

The aims of the Eastern Adirondack study include:

- Maintain a 'barrier' where a high enough proportion of the raccoon population is rabies-immune to prevent further northward progress of the rabies epizootic into northern Essex County, Clinton County, or ultimately Canada. This is the practical aspect of the project, sparing the northern parts of the state the considerable public

health costs of dealing with the presence of raccoon rabies. No terrestrial rabies has occurred north of the baited zone since 1997.

- Comparing aerial distribution of baits in patterns that target raccoon-preferred habitat, versus the uniform-pattern distribution being employed in other raccoon vaccination studies underway in both NY and other states. Data from vaccination studies in Massachusetts have suggested that habitat-targeted baiting may be more effective for raccoons than dropping baits along uniform flight lines. Habitat targeting may be a factor in the success of the NYSDOH project to date.

The Long Island project is a planned response to the introduction of raccoon rabies on Long Island, aimed at controlling and ultimately eliminating the disease to minimize its potentially very significant impact on public health in Nassau and Suffolk counties. The plan includes oral rabies vaccination with follow-up trapping as above, preceded and augmented by trap-and-test (in which animals are captured and removed for rabies testing in a limited area around an initial rabies case) and trap-vaccinate-release (TVR) in which captured animals are injected with parenteral vaccine and released on site. TVR may also be used to augment vaccination with ORV in Essex County, particularly when animals are already captured for serum sampling.

Tomahawk box traps are set during the day in secluded sites away from human and domestic animal traffic, and camouflaged with natural materials. Posted signs explaining the purpose of the project have been used to warn the public when trapping in areas where discovery of the traps seemed more likely. State, municipal, or private properties are used for trap sites with the permission of the manager/caretaker or owner. Raccoons are captured during their nighttime foraging, and traps are checked each morning.

Since the oral vaccine is aimed at immunizing free-ranging wild raccoons, capturing wild raccoons in the baited area and determining their antibody titers is the only way to effectively assess whether vaccination was successful. Rabies cases are also monitored but surveillance efforts and other factors affect these numbers so by themselves they provide incomplete information about the true impact of vaccination. Live-trapping following bait distribution has become the standard procedure with which to evaluate new bait/vaccine presentations, vaccination success in different environments, and in different populations.

The three raccoons lost to drowning on Long Island were accidental and an unfortunate consequence of this project. They represent less than 1 per cent of the total number of raccoons that were trapped during the reporting period (361). Waterways both natural (ponds, streams, rivers) and manmade (ditches, storm sewers) are known to be some of the most common travel routes and feeding sites of raccoons and successful capture depends on using these areas (supplemented by whatever potential den sites or extra food sources can be identified in the area). Weather reports are monitored throughout trapping and traps are often set or relocated according to predicted rainfall to keep them out of the reach of possibly rising water while still placing them within 'sniffing distance' of passing raccoons. GPS units are used to pinpoint the position of every trap, and each trapper maintains written logs and sketches of exactly where his/her traps are placed (these serve as reminders, but could also be used to guide a substitute trapper if illness or some emergency ever prevents the primary trapper from checking the traps). The drownings in Nassau County were the

unfortunate result of the combination of two factors: unfamiliarity with the 'recharge basin' system, and the earlier-than-predicted arrival of unusual amounts of hurricane-associated rain. The traps were not lost or moved, but simply submerged - and suddenly out of reach at six feet below the water's surface.

The recharge basins will remain essential to any raccoon work in Nassau Co since they appear to be the major hubs of raccoon activity particularly in the denser residential areas. The basins also provide fairly secure sites for trap setting since they are all enclosed by chain link fencing with locked gates. To avoid any tragic repetitions, we may adopt a policy of always setting traps around the upper rim of a storm basin when any significant rain is predicted for anytime within the following week.

**6. Federal regulations requiring this procedure:**

Not applicable.

### Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0141
2. Number 1 (ONE) of animals used in this study.
3. Species (common name) RABBIT of animals used in the study.
4. Explain the procedure producing pain and/or distress.

RABBIT Use Form: INDICATES THAT A RABBIT MAY HAVE BEEN IN STAGE II ANESTHESIA WHEN SURGERY WAS BEGUN. FORM INDICATES ANIMAL WAS SITTING UP AND KICKING WHILE CUTTING OCCURRED. ANIMAL SHOULD BE CLEARLY IN STAGE III BEFORE ANY INCISIONS ARE MADE. (SURGERY WAS BEING CONDUCTED BY STUDENTS (WHO ALSO COMPLETED THE FORM)).

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

N/A (NO SCIENTIFIC JUSTIFICATION)

CAUSE: INEXPERIENCED STUDENTS. IACUC REQUIRES INCREASED SUPERVISION FOR STUDENT-PERFORMED SURGERIES. (8 TRAINING)

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency \_\_\_\_\_ CFR \_\_\_\_\_

## MEMORANDUM

To:

From:

Re: USDA report

NY file # LCP-04-422

Date: 13 November 2004

Dear

As requested, here are the data you need for the USDA annual report. In the table below you will find detailed the number of species of small mammal I captured between 30 September 2003 and 1 October 2004. For each species, I have listed the total number of captures of an animal of that species, followed by the total number of unique individuals of the species. (We catch individual animals more than once). These data are quite good for the focal species in my research (*Clethrionomys gapperi*, *Peromyscus maniculatus*, and *Zapus hudsonius*). For species we only captured one or two times, it was also clear that each capture represented a unique individual animal. However, for non-focal species who we captured more than just a few times, (e.g. red squirrels) the total number of individuals listed is approximate and is based on my assessment of what the most likely number of unique individuals was among the total number captured. For example, it is not likely that we capture the same individuals at different trapping sites. Further, red squirrels and chipmunks are territorial and are not likely to move much, even within a trap site. With this information I approximated the total number of unique individuals present in the total number of captures.

Table 1. Itemization of the total number of captures of unique individuals according to species for the period 30 September 2003 through 1 October 2004. D.\*

Scientific name	Common name	Total captures	Total individuals	# deaths	Ours
<i>Clethrionomys gapperi</i>	red-backed vole	245	81	5	4
<i>Peromyscus maniculatus</i>	deer mouse	491	187	29	8
<i>Zapus hudsonius</i>	jumping mouse	55	34	0	0
<i>Sorex</i> sp.	shrew	6	3?	4	4
<i>Blarina brevicauda</i>	short tailed shrew	17	12?	4	4
<i>Glaucomys volans</i>	flying squirrel	36	20?	1	0
<i>Parascalops breweri</i>	hairy-tailed mole	1	1	0	0
<i>Sciurus carolinensis</i>	gray squirrel	10	1?	0	0
<i>Tamiasciurus hudsonicus</i>	red squirrel	122	75?	3	3
<i>Tamias striatus</i>	chipmunk	64	30?	1	1
<i>Erethizon dorsatum</i>	porcupine	21	15	3	0
Total:		1068	458	47	24

The last two columns of the table indicate the number of deaths we recorded between 30 September 2003 and 1 October 2004. The "# deaths" column is the total number of deaths we recorded per species. Note that the 3 porcupine deaths were intentional – these were animals we euthanized for our Bioelectrical Impedance Analysis calibration study and are not included in the total number of deaths. Thus, there were 47 "accidental" deaths over the course of the year. Out

\* ASSUMING CAPTURE/TRAPPING INVOLVES DISTRESS

of 1068 captures, this indicates a death rate of 4.4%. Of those 47 deaths, 24, or 51%, were caused by trapping or handling. In other words, 2.2 percent of the animals we handled died as a result of this project. There were 21 mice killed by a weasel during the study period. This accounts for 1.9% of the total deaths. Although one could argue that the weasel had an easier time preying on mice as a result of our study, we cannot know how many mice the weasel might have eaten had we not been present in the area. Presumably, it (or they) would have eaten some number of mice, their normal prey. We did attempt to trap and relocate the weasel, without success. The remaining 0.3% of deaths we were not able to explain – they were not a direct result of our trapping or handling techniques.

Annual Report Addendum, 2004, Facility No. 21-R-168  
Category E Explanation

The Guinea Pig Maximization (Sensitization) Test is a procedure which determines the allergenicity of materials. This study is required by the FDA Modified ISO 10993-1 matrix for preclinical evaluations of Class II and III medical devices. In this procedure, an adjuvant and saline extract are injected intradermally. (b)(4)

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and an Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

## REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY ( Attach additional sheets if necessary or use APHIS Form 7023A )

A. Animals Covered By The Animal Welfare Regulations	B. Number of animal being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals an for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for wh the use of appropriate anesthetic, analgesic, or tranquiliz drugs would have adversely affected the procedures, res or interpretation of the teaching, research, experiments, surgery, or tests. ( An explanation of the procedures producing pain or distress in these animals and the reas such drugs were not used must be attached to this report	F. TOTAL NUMBER OF ANIMALS  ( COLUMNS C + D + E )
4. Dogs					
5. Cats			16		16
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates	1		5		5
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

### ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

## ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
